

# Global Environmental Policy

## Lecture Plan

- Overview (April 8)
  - Background
  - The Road to Kyoto and Beyond
- Environmental Policy in Japan (April 15)
  - R&D policy
  - Toward Deep Reduction of GHGs
- Global Challenge towards Climate Change & Recent Topics (April 22)

M. Akai, AIST

# Towards a Deep Reduction

M. Akai, AIST

## Technological Options for Deep Reduction of GHG Emissions

- Improvement of energy efficiency
- Switching to lower carbon fuels, e.g. coal to natural gas
- Use of non carbon fuels, e.g. renewables, nuclear
- Enhancement of natural sinks for CO<sub>2</sub>, e.g. forestry
- **Capture and sequestration of CO<sub>2</sub>.**

β

- Importance of Technology Assessment

M. Akai, AIST

## CO<sub>2</sub> Sequestration May Play an Important Role

- Secondary Energy Demand: IS92a -

Reference

550ppm

4

M. Akai, AIST

# CO<sub>2</sub> Capture and Sequestration Technologies

M. Akai, AIST

## CO<sub>2</sub> Capture and Sequestration (Storage) - Status -

- Fossil fuels can be part of the energy mix
- Capture and storage of CO<sub>2</sub> enables deep reductions in emissions
- Cost (\$40-60/tCO<sub>2</sub> avoided) is no greater than large-scale application of other deep reduction measures
- It is not expected that all fossil reserves will be exploited
- This is a transition strategy to a different energy system – it is a means of gaining time

6

M. Akai, AIST

## CO<sub>2</sub> Capture and Sequestration - Aspects to be considered -

- CO<sub>2</sub> Capture
- CO<sub>2</sub> Transmission
- CO<sub>2</sub> Sequestration
  - Geological, Coal seam
  - Ocean
- CO<sub>2</sub> Utilisation
- Terrestrial sequestration

## CO<sub>2</sub> Capture

- 3 options
  - Post-combustion capture
  - Pre-combustion decarbonisation
  - Oxyfuel combustion

## CO<sub>2</sub> Capture

- Post-combustion capture
  - Chemical solvent scrubbing

## CO<sub>2</sub> Capture

- Pre-combustion decarbonisation
  - Physical solvent scrubbing

## CO<sub>2</sub> Capture

- Oxyfuel

## H<sub>2</sub> from Fossil Fuel

- CO<sub>2</sub> capture and sequestration towards hydrogen economy

Abraham Outlines \$1 Billion Coal Project  
The U.S. Department of Energy will call on industry to join it in building "FutureGen," the world's first plant to produce electricity and hydrogen from coal while capturing greenhouse gases. [► READ MORE](#)

**Energy, State Announce U.S. Plans to Form Global Sequestration Leadership Forum**  
World Ministers Scheduled to Convene in Virginia This Spring  
The Departments of Energy and State have announced plans for the United States to organize a ministerial level forum to advance the science and technology of carbon capture and sequestration. Representatives from around the world are scheduled to convene in June outside Washington D.C. for the Forum's first meeting. [► READ MORE](#)

13 *M. Akai, AIST*

## CO<sub>2</sub> Capture

- **Costs comparable with other deep reduction options**
  - All 3 approaches would capture CO<sub>2</sub> at costs of \$30-50/t-CO<sub>2</sub> avoided in large scale application
  - To reduce costs further will need radical changes in approach e.g. gas turbine with CO<sub>2</sub> as working fluid
  - **Novel ideas needed to re-optimize the process of generating power without release of CO<sub>2</sub>**

14 *M. Akai, AIST*

## CO<sub>2</sub> Transmission

- **Established technology**
  - Areas for improvement
    - Limited
  - Action being taken
    - Industry assembling performance data on high pressure behaviour of captured CO<sub>2</sub>

15 *M. Akai, AIST*

## CO<sub>2</sub> Sequestration - Options -

- **Geological**
  - Depleted oil and gas fields
  - Unminable coal measures
  - Deep saline reservoirs
- **Deep ocean**
- **Cost typically \$10/t-CO<sub>2</sub>**
  - In some cases may generate offsetting income

16 *M. Akai, AIST*

## Concept of CO<sub>2</sub> sequestration

17 *M. Akai, AIST*

## Is there sufficient capacity?

- **PNNL Simulation results:**
  - Total amount of CO<sub>2</sub> to be captured (1990 – 2095)
    - Coal-based scenario: 1230 Gt CO<sub>2</sub>
  - Estimated reservoir capacities:
    - Deep saline reservoirs: 400 - 10000 Gt CO<sub>2</sub>
    - Disused oil and gas fields: 920 Gt CO<sub>2</sub>
    - Unminable coal measures: >15 Gt CO<sub>2</sub>
    - Deep ocean: 4000 Gt CO<sub>2</sub>

Battelle Memorial Institute Pacific Northwest National Laboratory

18 *M. Akai, AIST*

## CO<sub>2</sub> Sequestration (Storage)

- All options should be considered
- Areas for improvement
  - Demonstrate CO<sub>2</sub> can be stored safely and securely
  - Verify amount stored (monitoring)
  - Environmental impact – demonstrate minimal leakage and other possible impacts
  - Build confidence with public and NGOs

19

M. Akai, AIST

## CO<sub>2</sub> Capture and Sequestration

- CO<sub>2</sub> capture technologies exist
  - Commercial CO<sub>2</sub> capture technology, though expensive, exists today.
- Means must be developed to isolate this CO<sub>2</sub> from the atmosphere
  - The ability to sequester large quantities of CO<sub>2</sub> is uncertain
- Deep ocean is one of a few possible CO<sub>2</sub> sequestration options, so it is important that we understand as much as possible about this option.

20

M. Akai, AIST

## Terrestrial sequestration

- Options
  - Afforestation, reforestation and land use changes
  - Popular
  - Allowed in Kyoto protocol
  - Significant potential in near term
  - Issue: security of storage
  - Warning: quoted costs often not on basis comparable with capture/storage

21

M. Akai, AIST

## CO<sub>2</sub> Utilisation

- Enhanced recovery of hydrocarbons
  - Established use
  - Result = storage of CO<sub>2</sub>
- Chemical fixation
  - More CO<sub>2</sub> released than stored
  - Quantities not material to solving problem
- Biological fixation
  - Vast areas of land required
  - Radical improvements needed in biology

22

M. Akai, AIST

## R&D on CO<sub>2</sub> Sequestration

23

M. Akai, AIST

## Major Research Programmes

- US DOE Carbon Sequestration Programme
- EC Fifth Framework Programme
- Canada
- Japan
- The Netherlands
- Norway - Klimatek Programme
- Australia - GEODISC Project
- Total Projected Expenditure - \$60-70 million
- CO<sub>2</sub> Capture Project - \$28 million

24

M. Akai, AIST

## Goal of the Research Programmes

- Studies to develop detailed scientific understanding of the technology
- Demonstration projects
- Help to build confidence in the technology
- Key ways to gain public acceptance
  - Technology Demonstration
  - Effective communication of results
  - Workshops & Dialogue

25

M. Akai, AIST

## METI's Project Geological Sequestration of CO<sub>2</sub>

- FY2000 - FY2004
- Objectives:
  - Accumulation of the data to assure the safety of underground storage of CO<sub>2</sub> through a small-scale field injection test and laboratory experiments.
  - Study on the social and economic aspects of the technology.
- Small-scale liquid CO<sub>2</sub> injection test will be conducted at an onshore gas/oil field until 2004.

26

M. Akai, AIST

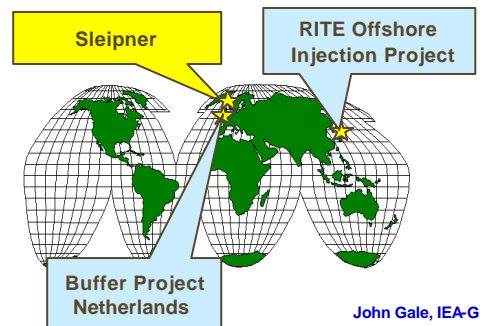

## METI's Project Study on Environmental Assessment of CO<sub>2</sub> Ocean Sequestration

- FY1997 - 2001 (Phase-1)
- FY2002 - 2006 (Phase-2)
- Goal: Development of a generic assessment model for describing and predicting CO<sub>2</sub> behavior from a discharge point to the ambient open sea and the resulting biological impact.
  - to provide necessary information to formulate international understanding/agreement on the technology

27

M. Akai, AIST

## Aquifer Injection Projects

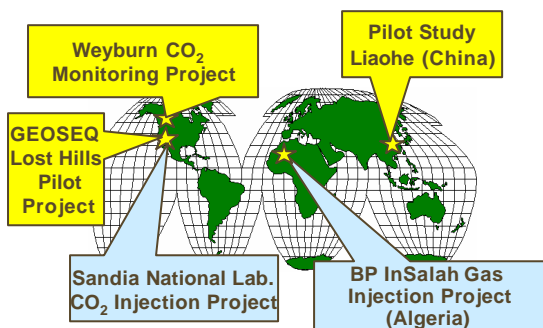

John Gale, IEA-GHG

M. Akai, AIST

28

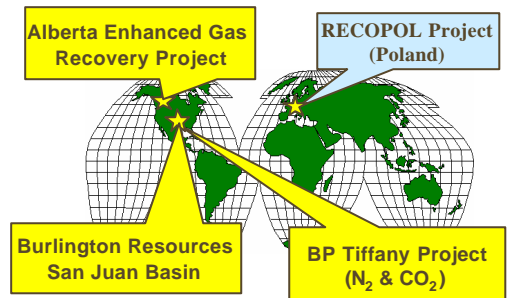

## Oil & Gas Field Projects

John Gale, IEA-GHG M. Akai, AIST

29

30

## Existing Commercial Projects

John Gale, IEA-GHG  
M. Akai, AIST

31

## CO<sub>2</sub> Pipelines

Photo courtesy of Dakota Gasification

- Existing CO<sub>2</sub> Pipelines
  - 3100 km of pipelines
  - Transport 114 Mt/y CO<sub>2</sub>
  - High purity CO<sub>2</sub> mostly
  - CO<sub>2</sub> transported in dense phase
  - Rated as Low Hazard
  - USDOT statistics
    - Incidents as likely as with gas pipelines
    - Impacts of failure much less significant

John Gale, IEA-GHG  
M. Akai, AIST

32

## Progress in Demonstration

- Status of Projects Underway
  - Present some initial results on Sleipner & SACS Projects
  - Review status of Weyburn CO<sub>2</sub> Monitoring Project

M. Akai, AIST

33

## Sleipner Project

- First commercial scale demonstration of CO<sub>2</sub> capture and storage
- Project commenced in 1996
- 1 million tonnes of CO<sub>2</sub> injected per year
- Deep saline aquifer under the North Sea
- Statoil are the project operators

M. Akai, AIST

34

## Sleipner CO<sub>2</sub> Storage

Courtesy of Statoil

M. Akai, AIST

35

## SACS Project in Sleipner

- Saline Aquifer CO<sub>2</sub> Storage (SACS)
  - EC supported R&D project led by Statoil
  - Project launched after joint IEA GHG/Statoil workshop in November 1997
  - Project is monitoring the injected CO<sub>2</sub> in the Utsira Formation
  - Consortium of energy companies
    - BP, ExxonMobil, Norsk Hydro, TotalFinaElf and Vattenfall
  - Consortium of research groups
    - BGS, BRGM, GEUS, IFP, TNO and Sintef

M. Akai, AIST

36

## SACS Project

### Project Structure

- Regional geology of Utsira Formation
- Geochemical reactions with the reservoir
- Geophysical Monitoring of injected CO<sub>2</sub>
  - Repeat seismic surveys
- Reservoir modelling studies

### Key Deliverable

- Best Practise of CO<sub>2</sub> storage in a deep saline aquifer

37

M. Akai, AIST

## The Utsira Formation

### Statistics

- Area -  $2.6 \times 10^4$  km<sup>2</sup>
- Depth - 550 to 1500m
- Two depositional centres
- Slopes south to north
- Uncemented sand
- Shale stringers
- Porosity 30-40%
- Volume -  $5.5 \times 10^{11}$  m<sup>3</sup>

38 Courtesy of Geological Survey of Denmark and Greenland

M. Akai, AIST

## Utsira Cross Section

Courtesy of British Geological Survey & Schlumberger Geco-Prakla

39

M. Akai, AIST

## Initial Results From SACS

### Geochemistry Studies

- Reaction of CO<sub>2</sub> within the Utsira formation
  - Laboratory scale studies underway
  - Limited potential for CO<sub>2</sub> to react with calciferous minerals within the reservoir
  - CO<sub>2</sub> unlikely to be chemically trapped
- Reaction of CO<sub>2</sub> with cap rock
  - Potential to reduce cap rock integrity
  - Laboratory scale studies underway
  - Results awaited

40

M. Akai, AIST

## Seismic Survey of Utsira

Courtesy of Statoil

41

M. Akai, AIST

## Initial Results from SACS

### Conclusions

- Geology of Utsira Formation well understood
- Limited chemical trapping of CO<sub>2</sub> in reservoir
- Injected CO<sub>2</sub> bubble can be monitored using seismic surveys
- Injected CO<sub>2</sub> expected to spill out of trap soon
- Migration paths within reservoir identified
- Reservoir modelling studies able to simulate injected CO<sub>2</sub>

42

M. Akai, AIST

## Initial Results from SACS

### Looking Forward

- New seismic survey in September 2001
  - 5 million tonnes of CO<sub>2</sub> injected
  - Data interpretation by early 2002
- Best Practise Manual in 2002

43

M. Akai, AIST

## Weyburn CO<sub>2</sub> Injection Project

- Site - Southern Saskatchewan, Canada
- Oilfield operated by PanCanadian since 1954
- Conventional and water flood enhanced recovery
- Estimated recovery of oil reserves - 35%
- CO<sub>2</sub> injection commenced in September 2000
- Estimated to recover additional 10-15% of OIP
- Extend field life by 25 years

44

M. Akai, AIST

## Weyburn CO<sub>2</sub> Pipeline

### 325 km Pipeline

- North Dakota Gasification Plant, USA
- Completed - September 2000
- 5,000 t/d of CO<sub>2</sub>
- 40% of total capacity
- Gas Composition
  - 97% CO<sub>2</sub>
  - 1% H<sub>2</sub>S

Courtesy of Dakota Gasification.

45

M. Akai, AIST

## CO<sub>2</sub> Enhanced Oil Recovery

46

M. Akai, AIST

## Weyburn

47

M. Akai, AIST

## Weyburn

48

M. Akai, AIST

## Weyburn CO<sub>2</sub> Monitoring Project

- Project established in September 1999
- Monitor CO<sub>2</sub> storage in the Weyburn oil field
- Managed by Petroleum Technology Research Centre
- International multi-partner research programme
- Funding:
  - Canadian Federal & Provincial Governments,
  - US DOE & European Commission
  - Industrial sponsors

M. Akai, AIST

49

## Weyburn CO<sub>2</sub> Monitoring Project

### • Project Structure

- Field data collection - PanCanadian
- Geology - Saskatchewan Energy & Mines
- Geochemistry - Alberta Research Council
- CO<sub>2</sub> Monitoring - LBNL<sup>1</sup> & CSM<sup>2</sup>.
- Sequestration Performance -PTRC

1 - Lawrence Berkeley National Laboratory

2 - Colorado School of Mines

M. Akai, AIST

50

## CO<sub>2</sub> Monitoring

- Carboniferous reservoir
- Techniques:
  - 3D 3C Surface Seismic
  - Cross well & VSP Seismic
  - Geochemical Sampling
  - Tracer Surveys
- Contrast with SACS
  - Sandstone reservoir
  - Seismic surveying (towed array)

M. Akai, AIST

51

## Progress and Status

- Weyburn Project Progress
  - CO<sub>2</sub> injection underway for 11 months
  - Evidence of incremental oil production
  - Only limited CO<sub>2</sub> response
  - Suggests oil bank forming
- CO<sub>2</sub> Monitoring Project Status
  - Baseline field data sampling completed
  - Pre injection seismic survey completed
  - Post injection seismic survey - autumn 2001
  - Results expected late 2001/early 2002

M. Akai, AIST

52

## International Collaboration Project on CO<sub>2</sub> Ocean Sequestration

- In December 1997 an agreement was signed by Japan, Norway and the USA under the auspices of the Climate Technology Initiative under the UNFCCC
- Canada and two private sectors - ABB (Switzerland), CRIEPI (Japan) - have subsequently joined as sponsors

M. Akai, AIST

53

## Ocean Sequestration - Background

- It is predicted that 80 - 85% of the CO<sub>2</sub> from fossil fuels will eventually be absorbed by the deep ocean, which currently contains ~38 trillion tonnes of carbon.
- CO<sub>2</sub> is accumulating in the air due to the slow rate of transfer between the surface and deep ocean:
  - Of the CO<sub>2</sub> emitted into the air today
    - 6% will be absorbed by the ocean in 1 year
    - 29% will be absorbed in 10 years
    - 59% will be absorbed in 60 years
    - 84% will be absorbed in 360 years

"Atmospheric Chemistry & Physics: from Air Pollution to Climate Change"

M. Akai, AIST

54

## Ocean Sequestration and Atmospheric CO<sub>2</sub> Concentration

55 Hoffert, M.I. et al, *Climatic Change*, 2, 53 (1977) M. Akai, AIST

## Relevance of CO<sub>2</sub> Capture and Sequestration

- CO<sub>2</sub> capture and sequestration might have an important role in deep reduction of GHG emissions allowing **continuous use of fossil fuels** for the time being.
  - Technological "surprise" needed to not to rely on sequestration technologies
- However, there still remains the issues apart from their associated risk and environmental impact...

56 M. Akai, AIST

## Technology and Society - Public Communication -

57 M. Akai, AIST

## Assumption

- Science is not a sanctuary
- Any act stands to receive criticism
- Work together to educate and inform the importance of the project
- Reach out in a timely fashion
- Provide clear and accurate information

*Information can mitigate risk*

58 M. Akai, AIST

## Purpose of Public Outreach

- To obtain public trust for scientists and experiments
- To make sure environmental groups and other local stakeholders are well informed and that their concerns are heard
- To minimize the possibility of unanticipated opposition that could impede the progress of the research

59 M. Akai, AIST

## Typical Lessons Learned

**International Collaboration Project on CO<sub>2</sub> Ocean Sequestration**  
- Proposed Experiment in Hawaii -

60 M. Akai, AIST

## Efforts

- The project committed significant project resources to a PO program which consistently reaches out to inform and involve the public.
- The effort was carefully coordinated through regular international teleconferences, usually on a bi-weekly basis, with Consultants and responsible members.
- The team responded in a timely manner to letters sent to the web-site or to the project team, and letters to the media.
- The team provided straightforward and substantive responses to concerned public, despite being scorned in letters from some opponents.
- The team adapted the experimental design as much as possible to address public concerns.

M. Akai, AIST

61

## Lessons Learned

### - Apotheosis of Marine Environment -

- Even the concerned researchers had been making light of the public's view that marine environmental protection is a top priority in Hawaii, especially for Native Hawaiians.

β

- **PO should focus locally first, being aware and responsive to local cultural and social issues.**

M. Akai, AIST

62

## Target Audience

- There are those individuals who, for their own personal reasons, choose to oppose the experiment.
  - These personal reasons may have nothing to do with the merits of the project, but relate to career or political aspirations.
  - For these people, no matter how much logical justification for such a project is presented to them, they will oppose it.

M. Akai, AIST

63

## Inside Story

### Opponents based on Personal Reasons

- On 18 May 2000, an email is received from **Dr. W** with his CV asking for a consulting role with the project for himself and **Mr. H**.
- On May 25, the Project team responds to **Dr. W** by asking for **Mr. H's** CV. **Dr. W** responds by saying he does not need compensation, but suggests that **Mr. H** be hired as a consultant to the project. **Mr. H** sends his CV to the project team.
- After the rejection, their activities became violent.

M. Akai, AIST

64

## Lessons Learned - Audience -

- PO can not guarantee 100% approval by the public.
  - The team should dialog with everyone, including opponents, but focus on cultivating supporters, rather than trying to convince opponents to change their mind.
- Do not waste resources to respond to those who oppose the project for their own personal reasons.
  - Some just want to manipulate our regulatory and governmental system in the hopes of receiving a payout from us.

M. Akai, AIST

65

## CO<sub>2</sub> Sequestration Technologies - Political Aspects -

M. Akai, AIST

66

## Recognition on Carbon Sequestration in the Political Arena

- Article 2 of the **Kyoto Protocol** acknowledges the importance of R&D on the technologies
- Received attention by **IPCC TAR**
- Recommendation by **Marrakesh Accord** in COP-7 for IPCC to prepare a technical report on (geological) sequestration technology

67

M. Akai, AIST

## Article 2 of the Kyoto Protocol

1. Each Party included in Annex I, in achieving its quantified emission limitation and reduction commitments under Article 3, in order to promote sustainable development, shall:
  - (a) Implement and/or further elaborate policies and measures in accordance with its national circumstances, such as:
    - .....
  - (iv) Research on, and promotion, development and increased use of, new and renewable forms of energy, of **carbon dioxide sequestration technologies** and of advanced and innovative environmentally sound technologies.

68

M. Akai, AIST

## Marrakesh Accord

- Invites the Intergovernmental Panel on Climate Change, in cooperation with other relevant organizations, **to prepare a technical paper on geological carbon storage technologies**, covering current information, and report on it for the consideration of the Conference of the Parties serving as the meeting of the Parties to the Kyoto Protocol at its second session;

69

M. Akai, AIST

## Status of IPCC Special Report on Carbon Capture and Storage

- **Decision at the 19th IPCC plenary meeting:**
  - To hold a workshop to consider the issues associated with geological and oceanic carbon separation, capture and storage
  - To develop expert advice to the Panel whether to develop a Special Report or to incorporate the issue in the Fourth Assessment Report
  - To deliver a scoping paper, timetable and detailed outline for a Special Report, and a proposed list of authors in case the experts would recommend a Special Report
- **Workshop (Nov. 18-22, 2002; Regina)**
- **20th IPCC Plenary Meeting (Feb. 19-21, Paris)**

70

M. Akai, AIST

## IPCC Workshop on Carbon Capture and Storage

November 18-22, 2002; Regina

- **Mandate**
  - To support a decision by the IPCC Plenary on a SR on Carbon Capture and Storage by 2005 or inclusion of this subject in the AR4 by 2007
- **Program**
  - Introductory Lecture
  - Discussion
    - Issues to be addressed in a Special Report
    - Availability of published papers by 2004
  - Consensus on Special Report
  - Preparation of documents
    - Draft table of contents
    - Scoping paper for the IPCC Plenary

71

M. Akai, AIST

## Recommendation for a Special Report - Scoping Paper -

- **CO<sub>2</sub> capture and storage (CCS) is an emerging technological option with a very high mitigation potential. It has been suggested that about half the world cumulative emission to 2050 may be stored at costs comparable to other mitigation options.**
- **Policymakers have a growing need for a reliable synthesis of the available scientific literature in order to facilitate the decision making process on the plans for CCS as a climate change mitigation option.**

72

M. Akai, AIST

## 20th IPCC Plenary Meeting

- **Decision**
  - IPCC Plenary has decided to prepare a Special Report on Carbon Dioxide Capture and Storage as proposed by the Scoping Paper.
- **Issues to be addressed:**
  - Participation of developing countries
    - To invite authors
    - To include a section on technology transfer
  - Permanence, environmental impacts and safety of both geological and ocean storage

73

M. Akai, AIST

## Related Decision

### REVISION OF THE "REVISED 1996 IPCC INVENTORY GUIDELINES"

#### COVERAGE AND METHODOLOGY DEVELOPMENT include:

- Following completion of the SR on Carbon capture and storage this issue will need to be considered in the Revised 2006 Guidelines.

74

M. Akai, AIST

## Schedule

- 2003.2: Decision by IPCC Plenary
- 2003.3: Selection of authors (CLA, LA RE, etc.)
- 2003.7.2-4: 1st LA meeting (Oslo)
- 2003.12 or 2004.1: 2nd LA meeting
- 2004.6: 3rd LA meeting
- 2004.12: 4th LA meeting
- **2005: Release of Special Report**

75

M. Akai, AIST

## Still...

- There is no (International) Rule on how to count captured and sequestered CO<sub>2</sub> in national GHG inventories
- Factors to be considered:
  - Permanency (long term leak),
  - Monitoring,
  - Verification, etc.
- Also important when used as a tool for Kyoto Mechanism

76

M. Akai, AIST

### International Research Project on Global Environment

## A Research Project on Accounting Rules on CO<sub>2</sub> Sequestration for National GHG Inventories (ARCS)

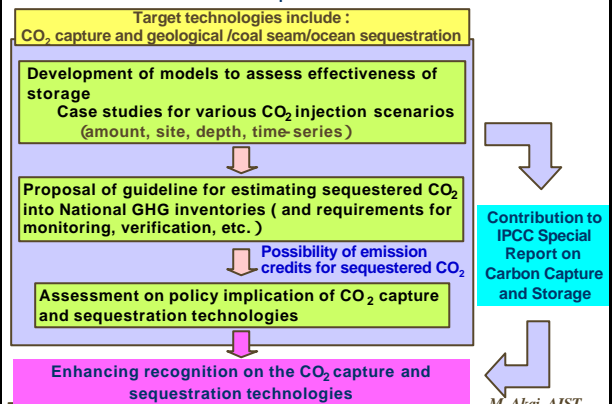

Project Duration: FY02-FY04

Contact:  
Makoto Akai (m.akai@aist.go.jp)  
National Institute of Advanced Industrial Science and Technology(AIST)

77

M. Akai, AIST

## R&D Steps and Goals

78

M. Akai, AIST

## Towards the Future

- Social acceptance for the technology
- Conformity with regulations
  - London Convention, OSPAR, Domestic Laws, etc.
  - Action for amendment, if necessary
- Definite recognition by IPCC and UNFCCC
- Better communication
  - Audience: general public, scientists, industries, policy makers, NGOs, etc.
- Accumulation of scientific knowledge

*M. Akai, AIST*
